MEMORANDUM FOR: Director of Special Activities

SUBJECT: Mission Planning for Project ██████████ 25X1A2g

25X1A2g

1. The attachment, generated by the ██████████ study group with the assistance of "I" and "O" mission planning personnel, is being provided as a guide in the selection of mission routes for use in that study. In order that the missions used accurately reflect the vehicle capabilities and deployment doctrine, the mission planning group for each of the five vehicles being studied is being asked for assistance in this area. Since OSA has purview for two of the vehicles under study, the OXCART and U2-R, this memorandum is a request for assistance in planning "typical missions" for those vehicles.

25X1A9a

2. The attachment specifies the data required, and more detail or clarification can be obtained from ██████████ OSI. In order to assure that the data provided is compatible with the simulation programs used, ██████████ will be available to participate in a more active basis as desired. The schedule of the program requires a firm definition of these data by 30 October 1967, but an initial set of routes is required earlier so that any program modifications required to assure acceptance of the mission routes can be made. An initial set should be available by 11 October 1967.
